

Implementing

Numeracy Project 2.0

Numeracy Project 2.0 training equips educators with the skills to understand numeracy development through the Number Framework and use student thinking to guide instruction. Participants learn to administer assessments to identify learning needs; design targeted, data-driven instruction and monitor progress to improve student outcomes.

The **Numeracy Project 2.0 workshop** supports K-12 teachers trained in the Numeracy Project, offering guidance on implementation and addressing common practitioner questions. It includes strategies for planning small group instruction and integrating progress monitoring.

With continued **embedded implementation support**, teachers will collaborate with a math consultant to examine student growth data, problem solve specific students/groups and/or support planning and implementation of intervention instruction.

Custom Plans

Customizable plans allow districts to tailor professional learning and instructional strategies to align with their unique goals, resources and student needs, ensuring targeted and effective implementation.

Embedded Support

Provide your team with individualized, ongoing support throughout the school year, helping them grow and reach their goals.

Flexible Scheduling

We can schedule flexibly by selecting dates that best align with the unique needs of your district and building.
